**(5) SPECIAL CONTINGENCIES :**

A leaking flex connector under dispenser 1/2 was discovered. IOME will break concrete in front of the island to uncover the product line. The flex will be removed and the line capped with a steel cap. The line being capped off will be tested to verify the rest of the line is sound. At that point the other dispensers can be re-opened for use of that product. The site has single wall steel piping and no containment. IOME is working on a quote to upgrade the system. Installing new tanks, containment and double wall piping.
