General Requirements

There shall be a minimum of two manufactured slotted or perforated observation wells of at least 4 inches in diameter, installed in each new tank field of tanks larger than 1000 gallons and one well for tanks less than 1000 gallons. A water tight containment shall be installed under all dispensers and at submersible pumps. A hydrostatic test must be performed on all containments. All steel piping for vents, risers, and fills in contact with the ground, backfill, or water shall be dielectrically wrapped or coated. A positive shut off valve shall be installed on pressurized product lines, at the submersibles, or installed at the tank for all suction piping systems. Vent piping is required to be tested from tank to grade level. All steel flex connectors in contact with ground, backfill or water shall have corrosion protection.

Summary of Work

Ground up new Phillips 66, Install new tanks, DW APT 1 3/4" lines, TLS450 ATG, New canopies, 13 new gilbarco dispensers

Special Contingencies

NOTES: Dispensers must maintain a full 10' from buildings and property lines. A motor fuel dispensing permit must be applied for asap

Amendment Reason:

Tank product changing and tank layout in the ground.

Revision Reason:

Tanks did not have the proper products in them on the original permit, which was an oversight on my part. Daniel Starks
