**General Requirements**

USTs shall be installed to safeguard against movement by anchoring in accordance with manufacturer's instructions. There shall be a minimum of two manufactured slotted or perforated observation wells of at least 4 inches in diameter, installed in each new tank field of tanks larger than 1000 gallons and one well for tanks less than 1000 gallons. A water tight containment shall be installed under all dispensers and at submersible pumps. A hydrostatic test must be performed on all containments. All steel piping for vents, risers, and fills in contact with the ground, backfill, or water shall be dielectrically wrapped or coated. A positive shut off valve shall be installed on pressurized product lines, at the submersibles, or installed at the tank for all suction piping systems. Vent piping is required to be tested from tank to grade level. All steel flex connectors in contact with ground, backfill or water shall have corrosion protection.

**Summary of Work**

Please change the following as I cant get to the area that I need to to make the changes.

Change tank 2 to 12,000 gallon

Change tank 3 to 8,000 gallon and product to E15 not E85

Change tank 4 to 20,000

**Special Contingencies****Amendment Reason:**

Tank sizing and Tank layout changed. Location is the same.

**Amendment Reason #1:**

Tank sizing and Tank layout changed. Location is the same.

**Amendment Reason #2:**

Tanks are brine filled not dry

**Revision Reason:**

Changed interstitial leak detection for the tanks per request of Inspector Brohan
