General Requirements

USTs shall be installed to safeguard against movement by anchoring in accordance with manufacturer's instructions. There shall be a minimum of two manufactured slotted or perforated observation wells of at least 4 inches in diameter, installed in each new tank field of tanks larger than 1000 gallons and one well for tanks less than 1000 gallons. A water tight containment shall be installed under all dispensers and at submersible pumps. A hydrostatic test must be performed on all containments. All steel piping for vents, risers, and fills in contact with the ground, backfill, or water shall be dielectrically wrapped or coated. A positive shut off valve shall be installed on pressurized product lines, at the submersibles, or installed at the tank for all suction piping systems. Vent piping is required to be tested from tank to grade level. All steel flex connectors in contact with ground, backfill or water shall have corrosion protection.

Summary of Work

Old 6k UST was removed. New piping was added from the new compartmented UST to all three UDCs. New 2" single-wall UPP pipe added for the vent lines.

Special Contingencies

NOTES: Dispensers must be at least 10' from all buildings and property lines. Vents must meet section 175.440 of our rules.

Amendment Reason:

Adding a second new pipe run to the dispensers and adding two UDC sensors. Clarifying single-wall vent pipe type.

Revision Reason:

Changed ownership
