## (5) <u>SPECIAL CONTINGENCIES</u>:

Adding a diesel dispenser, set at grade. The existing Premium tank will be cleaned and converted to diesel. The existing Mid-Grade tank will be converted to Premium. New Wayne Ovation dispensers will be installed. A singlewall dispenser sump with positive shut off nondescriminating sensor will be installed for the diesel dispenser. A new run of APT doublewall product piping will be run from the existing dispenser sump 3/4 to the new diesel dispenser sump. The existing Premium line(diesel) will remain in use. The existing Premium ATG probe will receive a new diesel float. The existing vapor bridge will be capped off to the diesel tank.

Amendment Reason: The tanks have a vaopr bridge. We need to remove and cap the vapor bridge from the diesel tank. This also requires we

move the products to different tanks than previously stated. There is equipment listed as installed on tank 5 that should have been removed per Larry
