(5) SPECIAL CONTINGENCIES :

- 8. Install new chase pipe and product pipe in the trench and run into the sumps.
- 9. Install new entry boots for the new product pipe and install new flex connectors and shear valves. Perform hydrostatic testing of the sumps and fill out appropriate forms for these tests to turn into ILOFSM. Water from hydrostatic testing to be pumped into sites oil water separator, if no OWS is present at the site will charge for storage and disposal of this water via change order. If issue is found with other existing entry boots, replacement of boots or sumps will be charged via change order
- 10. Have third party contractor perform line test.

11. Backfill the trench and around the sumps, install new island forms for all three dispensers and install new manway over STP sump. Manway included on previous bid for replacing entry boots and STP sump lid.
12. Drill and pin to existing concrete and replace removed concrete with new concrete. Barricade around new concrete to remain in place until concrete has cured.
13. Re-install existing fuel dispensers on the three dispenser islands, reconnect them to product piping and electrical.
14. Reconnect product pipe to the premium STP line and purge the line between the STP and the dispensers. Verify function of the dispensers and the STP.
15. Have final inspection for upgrade permit.

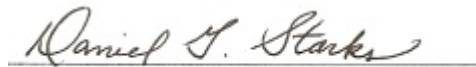

Replaced piping exceeds 20 feet or 50% of the total pipe run.
