SUBJECT: B99 FUEL COMPATIBILITY

To Whom it May Concern,

The Emco Wheaton A1004/A1005 series spill container has been tested and found to be suitable for use with B99 fuel. The heavy-duty gaskets and seals are made from Viton, which is a UL approved compound and widely regarded as having excellent resistance to various fuels and superior wear resistance. The primary and secondary liners feature either stainless steel or corrosion resistant high density polyethylene material. The bases are constructed from powder coated cast iron.

Emco Wheaton also provides B99 compatible A1100 overfill prevention valves. Simply add the suffix "E" to the part number to designate this compatibility. The valves feature Viton seals, anodized or electroless nickel plated aluminum parts and stainless-steel components.
