

Red Thread IIA Riser Pipe

The industry's first corrosion-resistant fiberglass riser pipe.

Have a question? Contact us.

Our Red Thread™ IIA riser pipe assembly was purpose-built to be durable, long-lasting, and compatible with tools that fit through a 4-in. Schedule 40 steel pipe.

Features

- Minimum wall thickness of 0.145 in.; more than twice the thickness of standard Red Thread IIA pipe
- Inside diameter (ID) of 4.026 in.; identical to 4-in. Schedule 40 steel pipe
- Total assembled length of approximately 68 in. when using standard 5-ft length of riser pipe

Benefits

- Corrosion-resistant FRP materials means no more stuck tools that do not fit through your riser
- Compatible with ultra-low-sulfur diesel (ULSD) and all current fuels
- The ID of the assembly is designed to accommodate most standard tools, such as drop tubes, fill tubes, and overfill prevention valves.
- Assembled length designed to be ideal for a maximum tank burial of 7 ft below grade
- Durable Red Thread IIA riser pipe uses significantly greater wall thickness to better withstand surface loading.
- Red Thread riser adapters have thicker walls and are lengthened to accommodate the thicker walled Red Thread IIA riser pipe.
- Both the pipe and adapters are made with the exact same materials used in our standard Red Thread IIA pipe.
- Ideal for use on both steel and fiberglass tanks
- Approved for both direct-bury and use inside a sump
- Pipe sized for application, making shipping easier and more cost effective
- Pipe can be cut and tapered in the field using existing tools

Regulatory Acceptance

- Red Thread™ IIA Riser Pipe is UL-971 listed in both the US and Canada
- RP100 allows for the use of non-metallic Riser Pipe. See section 10.13 of the latest RP100 document from PEI for more information.

A standard assembly includes:

- 1 qty 5-ft stick of 4-in. RTIIA riser pipe
- 2 qty 4-in. riser pipe BxMN adapter
- 1 qty PSX-20 adhesive kit

Recommended Tools

- 2102/2102-I box tool
- Strap wrench or chain wrench

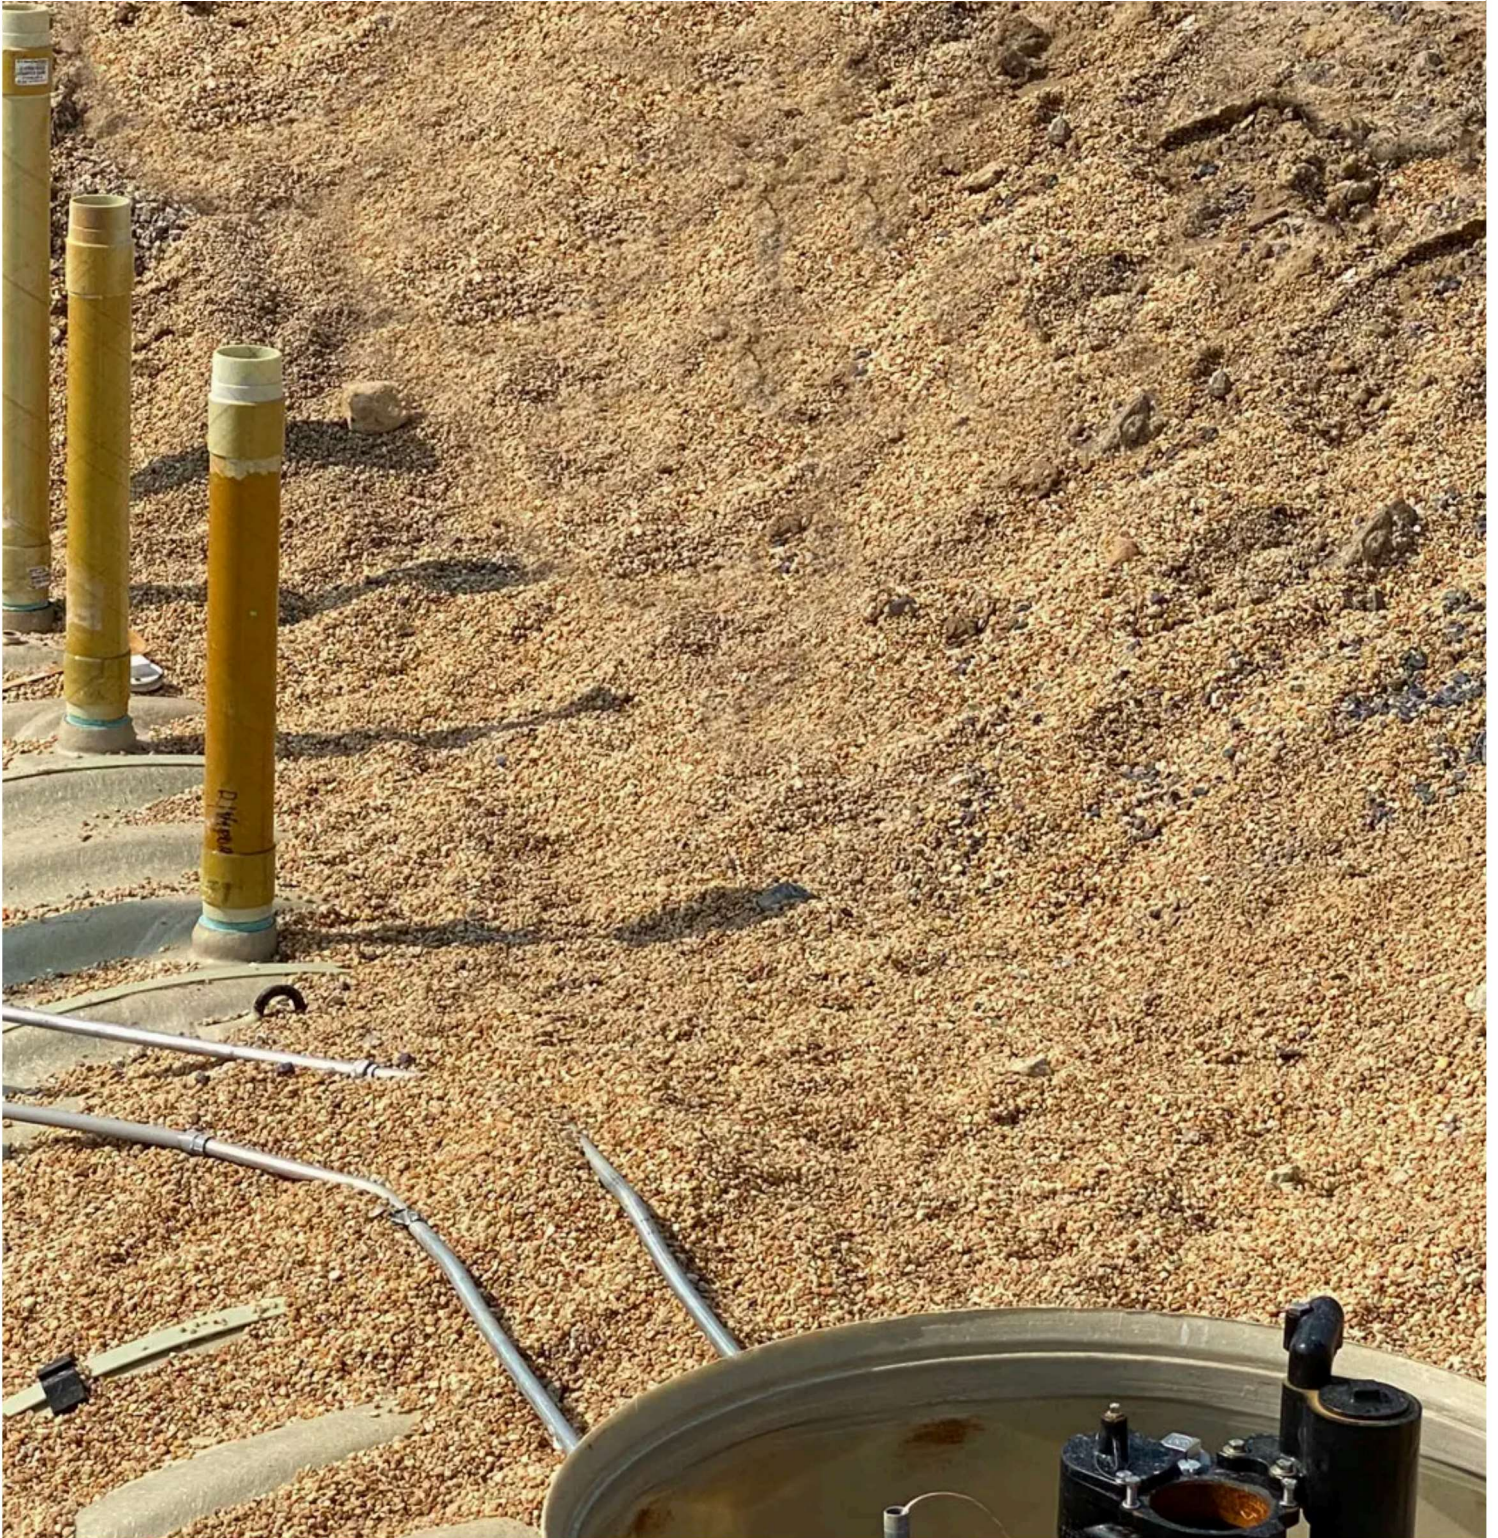

Typical Applications

- Tank Fill
- Tank Vent
- Spill Containers
- Submersible Pumps
- Sensor/Gauges
