SUBJECT: A1004/A1005 E85 FUEL COMPATIBILITY

To Whom it May Concern,

The Emco Wheaton A1004/A1005 series spill container has been tested and found to be suitable for use with E85 fuel. The heavy-duty gaskets and seals are made from Viton, which is a UL approved compound and widely regarded as having excellent resistance to various fuels and superior wear resistance. The primary and secondary liners feature either stainless steel or E85 resistant high density polyethylene material. The bases are constructed from powder coated cast iron.

We are currently under test with UL for UL 2447 approval, which includes E85 compatible tests. We have passed every test thus far and anticipate the results will be provided in mid to late February. We would be happy to share the UL approval for A1004/A1005 spill containers once we have the official paperwork from UL.
