

EBW® SERIES SPILL CONTAINERS

EBW® Series spill containers provide an economical solution for the collection of spilled product during normal tank filling of underground storage tanks. They are available in both grade level and below grade level models to meet the needs of your application and preference. The complete lineup of EBW® Series spill containers provides a basic, easy-to-install, and simple-to-maintain spill containment solution.

HIGHLIGHTS

- Available in both grade level and below grade level models to meet the needs of your application and preference.
- Single wall containment protection.
- The flexible polyethylene container is designed to move with natural ground movements.
- Drain and pump options facilitate easy return of spilled fuel back into the tank.
- A cast iron base provides stability (NPT or BSPT).
- Threaded base for new installations.
- Slip-on grade level models for retrofit applications use a gasket flanged bolt system to secure the spill container to the riser pipe and are designed to eliminate the need to remove the riser pipe from the tank when installing.
- Covers available in a variety of colors to clearly identify product contained in the tank and prevent cross drops.

Grade Level Spill Containers

- 5 gallon capacity.
- Grade level spill containers feature a durable cast iron deflector ring which provides protection from heavy traffic and truck plows while diverting water away from the spill container top.
- The container is equipped with a gravel guard to prevent backfill material from filling in around the movable shell, mitigating issues with ground movement.
- Composite, cast iron, or aluminum cover options.

Below Grade Spill Containers

- 5 gallon and 15 gallon capacity options.
- Below grade level spill containers feature a hinged, locking, watertight cover that prevents water from entering the containment.
- They include an 18" wide, 8" deep cast iron manway with either a composite or steel lid that allows forecourt traffic to pass cleanly over its top.
